SUMMARY

Data Analyst focused on writing clean code to process raw data and building dashboards that are easy for non-technical teams to understand. Comfortable using Python and SQL to clean messy datasets, and Power BI to visualize the results. I enjoy digging into the numbers to figure out why things happen and presenting those findings clearly to help guide business decisions.

TECHNICAL SKILLS

Programming & Analysis: Python (Pandas, NumPy, Jupyter), Excel (Pivot Tables, VLOOKUP), Java

Databases: SQL (MySQL, PostgreSQL)

Visualization & BI: Power BI (DAX), Tableau, Seaborn, Matplotlib

Tools & Cloud: Git/GitHub, Linux/Unix, AWS (EC2, S3)

PROJECTS

Zepto E-Commerce Data Analytics

2025

Inventory & Pricing Tracker

Python, Excel, Power BI

- Wrote Python scripts to clean and analyze data for 3700+ e-commerce products to figure out why certain items kept going out of stock.
- Grouped products by weight to calculate the exact price-per-gram, which helped identify the top 10 most profitable items in the catalog.
- Built a Power BI dashboard that flagged low-stock items in real-time so the team could reorder them faster.

Supply Chain Vendor Reliability Analytics

2025

Vendor Delay Tracking

SQL, Python, Power BI

- Used Pandas to clean up over 10,000 supply chain records and calculate actual delivery times versus expected delivery times.
- Wrote SQL queries to group the data by vendor to see which specific suppliers were consistently causing delays.
- Created a visual tracker in Power BI that clearly ranked vendors from highest to lowest risk for the procurement team.

HR Workforce Attrition Analytics

2026

Employee Turnover Analysis

Python, Power BI, DAX

- Processed 1470 employee records in Python to track basic turnover rates across different departments.
- Looked at the data to find patterns in why people were leaving, discovering that high overtime and salary gaps were the biggest factors.
- Designed a dashboard that HR teams could use to see which departments had the highest risk of employees quitting.

EDUCATION

Vellore Institute of Technology - AP

Amaravati, India

B.Tech in Electronics and Communication Engineering | Minor in Computer Science

June 2026

• **CGPA:** 7.76

• **Relevant Coursework:** Database Management, Data Analytics, Statistics, Cloud Computing

Kendriya Vidyalaya

Kolkata, India

Secondary Education (10+2) | Physics, Chemistry, Maths, Computer Science

2022

• **Percentage:** 80.8%
