SUMMARY

Data Analyst skilled in SQL, Python, and Power BI, with experience in data visualization, ETL pipelines, and analytics automation. Proficient in Azure Data Factory, Databricks, and Synapse for data transformation. Adept at turning raw datasets into actionable insights through data storytelling, statistical analysis, and business intelligence reporting.

SKILLS

- **Programming:** SQL, Python, Java, Shell Scripting
- **Visualization:** Power BI, Seaborn, Matplotlib
- **Data Tools:** Azure Data Factory, Databricks, Synapse, Data Lake
- **Analytics:** Data Cleaning, EDA, Data Modeling
- **Libraries:** Pandas, NumPy, PySpark
- **Databases:** SQL Server, PostgreSQL, MongoDB
- **Version Control:** Git, GitHub, Linux

PROJECTS

Pokémon Data Analytics Pipeline (Airflow, Azure, Databricks, Power BI)

- Built an end-to-end data pipeline using Airflow, Azure Blob Storage, Databricks, and Synapse to extract, transform and visualize 1000 Pokémon records from the PokéAPI.
- Automated data ingestion workflows via Airflow DAGs and stored raw datasets in Azure Data Lake (Bronze layer).
- Processed and cleaned data in Databricks using PySpark to normalize abilities and types, reducing redundancy by 38% and improving query efficiency.
- Implemented Medallion architecture (Bronze, Silver, Gold) for data structuring.
- Created analytical views in Azure Synapse.
- Built an interactive Power BI dashboard to analyze Pokémon attributes by type, attack, defense, HP, and speed.
- Delivered an intuitive one-page dashboard achieving a 100% interactive filtering experience and real-time type-based analytics.

End-to-End Data Pipeline on Azure (AdventureWorks Dataset)

- Built a cloud-native ELT pipeline on Azure using Data Factory, Databricks, Synapse, and Power BI for the AdventureWorks dataset (50K+ records).
- Ingested raw data from GitHub into the Bronze layer of Azure Data Lake Storage Gen2 using parameterized pipelines in Azure Data Factory.
- Performed extensive data cleaning, joins, and transformations in Azure Databricks using PySpark, converting CSVs to optimized Parquet format and storing curated data in the Silver layer.
- Modeled curated views in Synapse, and created Power BI dashboards for sales and customer insights.
- Achieved 45% faster query performance following the Bronze–Silver–Gold architecture.

EDUCATION

Vellore Institute of Technology - AP , Amaravati

B.Tech in Electronics and Communication Engineering

Minor in Computer Science Engineering | Sept 2026 (Expected)

CGPA: 7.52

Relevant Coursework: Data Analytics, Database Management, Statistics, Cloud Computing
